

INSIGHT REPORT

Bank Transactions & Account Holders

Prepared by: Aishwarya Mate | Tool: MySQL Workbench 8.0

Data as of: Jan 2024 – Dec 2025

1. Executive Summary

The account_holders and bank_transactions datasets were loaded into MySQL Workbench and analyzed using the queries in 04_business_insights_queries.sql. The bank services 1,500 accounts across 20 branches in India and processed 12,207 transactions worth over ₹28 crore between January 2024 and December 2025. The findings below are organized around customer base, transaction behaviour, and operational risk.

2. Customer Base Overview

Segment mix: Retail customers make up 69.8% (1,047) of the base, Premium 21.6% (324), and Corporate 8.6% (129) — a typical retail-bank pyramid.

Account type: Savings accounts lead with 918 accounts (61.2%), followed by Salary (292) and Current (290) accounts.

KYC compliance: 111 out of 1,500 accounts (7.4%) still have KYC marked Pending. Of these, 109 have already completed successful transactions — a compliance gap worth flagging to the operations team.

Account activity: Every account in the dataset has at least one transaction on record; there are no fully dormant accounts in this extract.

3. Transaction Volume & Value

Overall split: Of 12,207 transactions, 94.4% (11,518) were Successful, 3.8% (464) Failed, and 1.8% (225) Pending.

Credit vs Debit: Successful Credit transactions totalled ₹16.48 crore across 5,028 transactions; Debit transactions totalled ₹11.52 crore across 6,490 transactions — debits are more frequent but credits carry higher average value.

Top channels by transaction count (successful transactions):

Channel	Transactions	Total Amount (₹)
UPI	3,727	9,13,50,489
NEFT	1,477	4,11,75,533
POS	1,475	2,82,23,986
IMPS	1,367	3,60,79,986
ATM	1,209	1,93,30,674

Channel takeaway: UPI is by far the most-used channel (30.5% of all successful transactions), confirming the shift toward digital, low-ticket-size payments; NEFT and IMPS still carry a disproportionate share of value due to larger transfer sizes.

4. Where Customers Spend (Merchant Categories)

Among UPI/POS debit spends, Grocery leads with ₹1.57 crore across 802 transactions, followed by Dining & Food Delivery (₹1.07 crore) and Shopping (₹83.5 lakh). Utility Bills and Fuel round out the top five categories, together confirming that day-to-day essential spending dominates digital debit activity.

5. Branch & Customer Performance

Top 5 branches by successful transaction value:

Branch	Transactions	Total Amount (₹)
MG Road Branch (Kochi)	548	2,02,50,809
Whitefield Branch (Bengaluru)	607	1,97,81,167
Koramangala Branch (Bengaluru)	634	1,84,73,568
Anna Nagar Branch (Chennai)	574	1,72,62,716
Connaught Place Branch (Delhi)	638	1,59,76,529

Segment value: Corporate accounts carry the highest average post-transaction balance (₹3,78,861), well above Premium (₹1,08,281) and Retail (₹28,826) — expected, but useful for prioritizing relationship-manager attention.

Top customers: The five highest-value customers by successful transaction total are all Corporate-segment accounts, each contributing between ₹29 lakh and ₹33 lakh in transaction volume over the period — a small group that deserves dedicated account management.

6. Risk & Operational Quality

Failure rates by channel: Cheque Deposit has the highest failure rate at 5.18%, followed by Salary Credit (4.79%) and ATM (4.07%). UPI, despite the highest volume, has a moderate 3.87% failure rate.

High-value transactions: 634 transactions exceeded ₹1,00,000 in value, totalling ₹11.81 crore — these are candidates for the bank's manual/AML review queue.

Transaction value bands (successful transactions):

Value Band	Transactions	Total Amount (₹)
Small (< 1,000)	1,013	4,85,223
Medium (1,000 – 10,000)	4,450	2,23,64,280
Large (10,001 – 50,000)	4,705	9,73,06,230
Very Large (> 50,000)	1,350	15,99,10,300

7. Recommendations

- Prioritize KYC completion for the 109 accounts that are actively transacting despite Pending status — this is a compliance exposure, not just a paperwork gap.
- Investigate the Cheque Deposit and Salary Credit failure rates with the payments/ops team, since these are typically lower-friction channels than UPI.
- Route the 634 transactions above ₹1,00,000 through the existing manual review workflow if not already covered.

- Consider a dedicated relationship-management track for the small set of high-value Corporate customers identified in Section 5.
- Continue monitoring UPI growth — it already leads on transaction count and is likely to keep growing as a share of total volume.
